The invention relates to an isolated NOVX polypeptide selected from NOV1a, NOV1a, NOV1a, NOV2b, NOV2c, NOV3a, NOV3b, NOV4b, NOV4b, NOV5c, NOV3b, NOV5b, NOV6b, NOV7, NOV7, Nov6b, uncreatia, cancer, neurodegenerative disorders (e.g. Alzheimer's disease, parkinson's disease, Huntington's disease, multiple sclerosis and manyotropic lateral sclerosis, acute brain injury (e.g. stroke, head injury and cerebral palsy), central nervous system disorders (e.g. depression, epilepsy and schizophrenia), lung disorders, reproductive disorders, disorders affecting carbohydrate metabolism (e.g. Wiskott-aldrich syndrome, thrombocytopaenia, night blindness and pick's disease), disorders linked to abnormal angiogenesis, asthma, azospermia, learning disabilities, facial dysmorphism, autoimmune encephalomyelitis, X-linked severe combined immunodeficiency, seizures, migraines, inflammation, autoimmune disorders, disorders affecting sleep, reproductive disorder; tissue disorder; thrombocytopaenia; migraine; angiogenesis; asthma; X-linked severe combined immunodeficiency; infinamation; autoimmune disorder; immune disorder; blood disorder; haematopoietic disorder; gastrointestinal disease; respiratory disorder; hepatitis; fertility; hypertension; arteriosclerosis; ischaemia; rheumatoid arthritis; Grave's disease; wound healing. New cytoplasmic, nuclear, membrane bound and secreted NOVX polypeptides, useful for treating cancers and tumors, lung disorders, hematopoietic disorders, autoimmune diseases and immune disorders. vascular disorder, infectious disease, anorexia, cancer, stroke, neurodegenerative disorder, Alzheimer's disease, acute brain injury, central nervous system disorder, depression; lung disorder; developmental disorder; endocrine disorder; , Taupier RJ, Vernet CAM, Colman SD; T, Malyankar UM, Shenoy S, Tchernev VT; an M, Burgess CE, Smithson G, Millet I; Gunther E, Ellerman K; Vernet CAM, C Claim 9; Page 59-60; 210pp; English. 15-SEP-2000; 2000US-0232675P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       οŧ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patie; in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of th

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host

Disclosure; Page 119-120; 144pp; English.

stroke.

diseases listed in the specification. The probes and antibodies are also diseases listed in the specification. The probes and antibodies are also restful for diagnosing cognition and memory disorders, anorexia, hormonal release disorders, cardiovascular activity disorders, pain perception disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polynucleotide cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulator compounds which function as modulators, activators, repressors, agonists or antagonists of the novel GPCR polypeptides including the GAHA polypeptide. The antibodies and nucleic acid probes as and nucleic acids and are used to detect the presence of the polypeptides and nucleic acids and are used to diagnose a variety of diseases or amyotrophic lateral sclerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic acciding because depression, appliesy, macular degeneration, lymphoma, melanoma, multiple sclerosis, heumatoid osteoarthritis, osteoporosis, parkinson's disease, psoriasis, heumatoid osteoarthritis, osteoporosis, parkinson's disease, psoriasis, heumatoid 26; Length 977; Sequence 977 BP; 121 A; 356 C; 324 G; 176 T; 0 U; 0 Other; 20; Indels 64.7%; Score 745; DB 6; L 94.6%; Pred. Oligonucleotides corresponding to conserved regions of known serotonin receptors were used in PCR of mouse brain RNA in presence of reverse transcriptuse and the products were sequenced. One product with homology to known receptors was labelled and used to probe a CDNA library in Lambda UniZAP. The 2036 bp sequence AAA70264 was identified and deduced to encode a protein having 7 hydrophobic domains which represents a novel serotonin receptor which was designated 5HT5b. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to

The invention also relates to transgenic mice comprising mutations in 5-hydroxy-tryptophan (5-HT)5B receptor gene. The transgenic mice are useful for identifying an agent that modulates the phenotype such as increased depression or increased pain sensitivity. They are also useful for identifying potential therapeutic agents for the treatment of pain or depression and for evaluating a potential therapeutic agent capable of affecting a condition associated with a mutation in a 5-HT5B receptor gene. Transgenic animals of the invention are also useful for testing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               425

```
The nucleotide sequence of the novel rat serotonin receptor MR22. The gene encodes a protein of 370 amino acids. The protein contains 7 cransembrane domains (TMDS), a putative N-linked glycosylation site and 4 putative sites for kinase C phosphorylation. Serotonin receptors a wide crange of sensory, motor and behavioural functions in the central nervous system (CNS). Serotonin receptors belong to at least two protein superfamilies: G-protein-associated receptors containing 7 TMDs (S-HT13/PbC/d/d/s-5-HT2) and ligand-gated ion channel receptors superfamilies: G-protein-associated receptors presented in the patent represent prototypes that fall into three new serotonin subfamily classifications: 5-HT16-like (rat MR77 - AAQ72271 and human MR77 - AAQ72272), 5-HT5 (subdivided into 5-HT5lpha, rat REC17 - AAQ72269 and 5-HT5 (brit the receptors were cloned by amplification based on conserved amino contain sequences and used in two rounds of nested PCR amplification on a crat brain hypothalamic cDNA template. In the second round of amplification degenerate primers corresponding to conserved residues found in the TMDs manual fragments were cloned into pBluescript vectors. The plasmid fragments were used to samplify only those receptors. The resultant fragments were used to samplify only those receptors. The resultant fragments were cloned into pBluescript vectors. The plasmid fragments were used to screen a rat hypothalamus contains may be used in methods for determining luman in receptors, dray screening and altering expression of serotonin receptors. Grand therspeutic treatments involving human in receptors and therefore the receptors are contained the receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ij

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                              diagnostic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox
                                                                                               Primary rat hepatocyte toxicity modelling related gene SEQ ID NO:2961

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host call comprising an expression vector comprising the GPCR sequence. The polypeptides, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulators of the polypeptides. Which function as modulators, activators, identifying modulator compounds which function as modulators, activators, repressors, agonists or antagonists of the novel GPCR polypeptides including the GAL4 polypeptide. The antibodies and nucleic acid probes as described above can be used to diagnose a variety of disease or disorders in which GPCRs are involved e.g., Alzheimer's disease, amyotrophic lateral sclerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, choosis, chronic costume degeneration, lymphoma, melanoma, multiple sclerosis,

arthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid arthritis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and mency disorders, anorexia, hormonal release disorders, cardiovascular activity disorders, pain perception disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds be used to increase the expression of galanin receptor (GAL4) can be used to treat obesity, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360

```
The invention relates to single nucleotide polymorphisms in the gene encoding human 5-hydroxytryptamine (serotomin) receptor 5A (HTRSA). A method for haplotyping the HTRSA gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and

the HTRSA haplotypes given in the specification or whether both copies are defined by a haplotype pair. This method is useful in genotyping, whereby all possible haplotype pair. This method is useful in genotyping, pair of the HTRSA gene can be identified by comparing the frequency of the HTRSA gene can be identified by comparing the frequency of the haplotype pair in a population exhibiting the trait with the frequency of the haplotype or haplotype frequency in the trait population, where a higher haplotype frequency in the trait population indicates the trait is associated with the haplotype or haplotype pair. HTRSA and its corresponding DNA are used for studying the expression and function of HTRSA, and in screening for candidate drugs to treat diseases related to HTRSA activity, such as neurological disorders, including depression and epilepsy. This sequence represents the DNA encoding the human HTRSA polypeptide

488888	The present any one of 16 acids. Also cprotein-coupland (2) an is	The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABB83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or

CAGATGGTGTTCACGGTCC---GCCACGCCACCGTCACCTTCCAGCCAGACAGGGACACG 822

avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, call regeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alabiemer's disease, atherosclerosis, bacterial, fungal, protogoan or viral infections, osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention Sequence 1074 BP; 182 A; 366 C; 284 G; 242 T; 0 U; 0 Other;

/note="Organ: pooled brain, lung, testis; Vector:
pcWV-SPORTE; Site l: Not1; Site 2: EccRV (destroyed); RNA source anonymous pool of 6 male brains, age for Library is male lung, age 27; and l male testis, age 69. Library is oligo-dT primed and directionally cloned (EccRV site is destroyed upon cloning). Average insert size 1.8 kb, insert size range 1.3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 021. Note: this is a NIH_MGC Library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            719
